Join flavor	Output records
kind=leftsemi	Returns all the records from the left side that have matches from the right.
kind=rightsemi	Returns all the records from the right side that have matches from the left.
kind=leftanti, kind=leftantisemi	Returns all the records from the left side that don't have matches from the right
kind=rightanti, kind=rightantisemi	Returns all the records from the right side that don't have matches from the left.
kind=leftouter	Returns all the records from the left side and only matching records from the right side.
kind=rightouter	Returns all the records from the right side and only matching records from the left side.
kind=fullouter	Returns all the records for all the records from the left and right sides. Unmatched cells contain nulls.
kind=inner	Returns all matching records from left and right sides.
kind unspecified, kind=innerunique	Only one row from the left side is matched for each value of the on key. The output contains a row for each match of this row with rows from the right.
